

Timberline Park & Shade

Premium Turf Seed

TIMBERLINE PARK & SHADE MIX

TURF-TYPE PERENNIAL RYEGRASS AND FINE FESCUES

Highest Germination Rate | Advanced Testing | Unparalleled Standards

FEATURES

- Advanced generation cultivars
- Moderate to low maintenance
- Good for full sun to moderate shade
- Quick establishment
- Drought tolerant
- Fine texture
- Medium green color

AGRONOMIC CHARACTERISTICS

Timberline Park & Shade Mix forms a durable turf for general use areas and is specifically formulated for the Pacific Northwest climate. Timberline Park & Shade Mix will perform well under a wide range of maintenance levels and can be established in full sun to moderately shaded conditions. This mix will provide turf with a fine, dense texture, with excellent mowing quality and a rich green color. Timberline Park & Shade Mix will establish quickly for maximum competition against annual weeds.

SUGGESTED USAGE

Timberline Park & Shade Mix is suitable for home lawns, commercial turf, and parks and cemeteries where other turf grass species are limited by shade conditions.

TURF ESTABLISHMENT GUIDELINES

Adequate seed bed preparation is important in new turf grass establishment as well as in overseeding applications. Check soil pH and apply LESCO starter fertilizer prior to seeding. Cool-season grasses germinate best in the 60° to 85° F (16° to 30° C) soil temperature range. Frequent light irrigation and/or seed starter mulch is required for optimum germination. Germination should be visible within 14 days; complete turf establishment will take six to eight months to exhibit mature growth characteristics.

RECOMMENDED MAINTENANCE PRACTICES

Highest quality and durability are reached using moderate maintenance levels. Allow turf to establish prior to heavy use. Mowing height at 1 1/2" to 2 1/2" is recommended (lower mowing heights require higher maintenance).

ENVIRONMENTAL TOLERANCE

Timberline Park & Shade Mix is adapted to cool arid and cool humid zones in the Pacific Northwest.
